print ('Hello World')	displays it
string	"Begin Pearl Necklace of Characters End"
error	search on stack Overflow
If you want to print print	print ("print(' 1 ')") → single Quote for printing Inside
string interploitation	print ('helloworld \nhelloworld')
	prints it twice
Cancoctenate	Adding 2 pearl beeds together
	print ("Hello" + "Aysho")
Input	input('What is your name?')
	What is your name? Shirin ← type
	↳ replaces this code
I want to print Hello Shirin	print ("Hello" + input ('x'))
	when you put input in
	It will print
IDE	thonny. org
	↳ Beginners IDE
	Debug symbol
	↳ step Into
Empty Space	" "
\n	linebreak

Hello Shirin	`print ('Hi')`
	`x = input ()`
	
	`print ('Hela' + x)`

length of a string	`S = ' Hi'`
	`len(s)`
	
	`print (len (s))`
	
	`print ( len (input('Hi')))`

variable	like if we give number 666 we wont remember In Phonebook we have to add Name `Jon = 666` We can change name later if we want Make variable as descriptive as possible Dont use privelaged words

exchange letters	`a = 5`
	`b = 10`
	make it opposite
	
	`C = a`
	`a = b`
	`b = C`
